## Over the past 3 years :

More than **20** renewable energy business projects has been launched

More than **300** projects has been developed

Grid connection of the facilities with total capacity over **250 000 kW** has been implemented

"EC NET" LLC is the leading company in energy project management in Ukraine.

The company provides the following services :

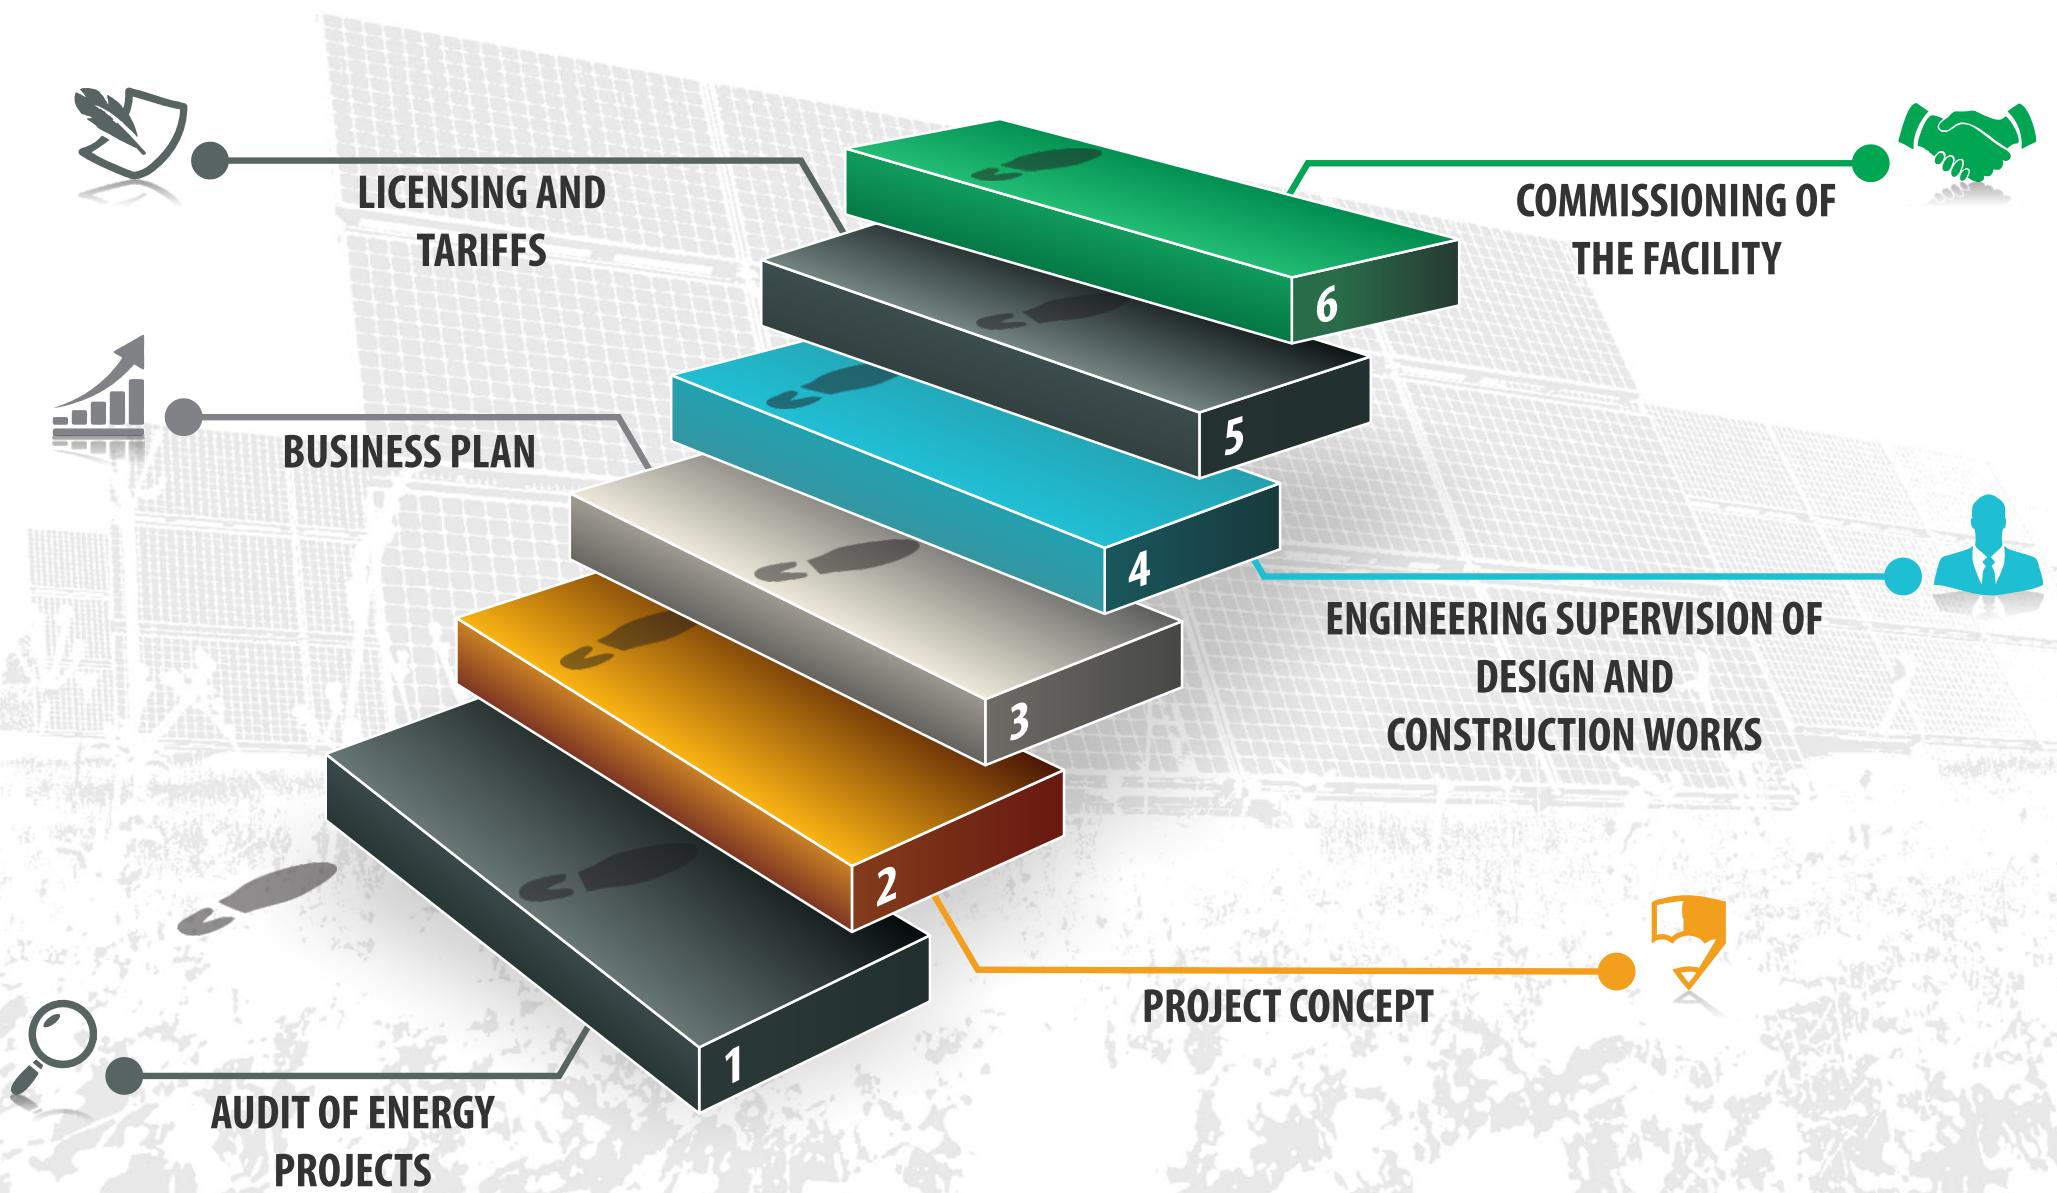

- ✓ development of the concept for business projects in energy sector;
- ✓ implementation of the investment projects with application of the renewable energy sources and innovative technologies;
- ✓ problem solving on energy saving and energy efficiency of the facilities;
- ✓ connection of the facilities to external power grids.

The success of the company is determined by the integrated approach of solving problems in energy sector and constant monitoring of the market trends.

The professionalism of the company is highly appreciated by many our customers: industrial enterprises, energy companies, shopping malls, private investors.

# Energy Projects Management

EC NET experts have the knowledge and practical skills necessary for successful implementation of the projects in energy sector.

The following services are offered to the investor for business foundation:

- development of the business project concept;
- selection of the land lot for construction of the facility;
- analysis of the facility connection to the engineering networks;
- business plan development.

# Grid Connection

EC NET provides a full range of services for connection to the external power grids of both conventional and renewable energy facilities as part of the Energy Projects Management.

## Grid connection includes the following activities:

- analysis of the possible options for connection;
- preparation of a feasibility study (FS);
- design development;
- acting as general contractor;
- commissioning of the facility,

# Energy Efficiency and Energy Saving

EC NET company is ready to develop and implement the concept of "turnkey" projects for the efficient use of energy and introduction of the innovative technologies.

# Modernization of 110/35/10 kV substation and construction of new 35/10 kV substation

**Essence of the project:** modernization of 110/35/10 kV substation and construction of new 35/10 kV substation to ensure power supply of the agro-industrial complex for storage and processing of the agricultural products in Kyiv region. Maximum design load is 4000 kW.

**New 35/10 kV substation has been commissioned in 2012.**

# Biogas Power Plant

**Essence of the project:** construction of the engineering complex with installed system of biogas collection at the SDW landfill in Kyiv region.  
**Biogas power plant has been successfully commissioned:**  
**Unit I: 885 kW in 2012; Unit II: 1063 kW in 2014.**

## Solar Power Plant

**Essence of the project:** construction of the on-site solar power plant (SPP) in Kherson Region. Electric capacity of the SPP is 9 MW.  
**9 MW SPP has been commissioned in 2013.**
